ECE 120: Introduction to Computing

Letter Frequency Coding

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 1

Review the Problem to Be Solved

The task:

- given an **ASCII** string (terminated by **NUL**)
- count the occurrences of each letter (regardless of case), and
- the number of non-alphabetic characters.

The high-level approach:

initialize histogram to all 0s
for each character in the string
 increment the appropriate histogram bin

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 2

Where Are the Pieces in Memory?

Let's start with some notes about
where we want to store information

x4000 the start of the string
x3000 the start of our code
x3100 non-alpha histogram bin
x3101 to x311A alpha bins A to Z (in order)

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 3

What Shall We Keep in the Registers?

For the counting part, we will
use registers as follows

R0 histogram pointer (x3100)
R1 string pointer (moves)
R2 current character from string
R3, R4, R5 ASCII constants (to be chosen)
R6 temporary

ECE 120: Introduction to Computing

slide 4

Get a Pointer to the Histogram into R0

x3000 LEA R0,xFF

We could use an LD instruction.

But there's a better way, without storing x3100 in memory.

We need to initialize R0 to x3100.

We Also Need to Fill the Histogram with 0s

The next step: fill the histogram with 0s.

We need registers.

Let's reuse a few (so far, only **R0** is initialized).

- R1** a loop counter (27 iterations)
- R2** current histogram bin to fill
- R6** the number 0 (to store)

Prepare Our Registers to Initialize the Histogram

x3000 LEA R0,xFF
x3001 AND R6,R6,#0

To set R6 to 0, use an AND.

Now, we need to initialize R6 to 0, R1 to #27, and R2 to x3100.

Prepare Our Registers to Initialize the Histogram

x3000 LEA R0,xFF
x3001 AND R6,R6,#0
x3002 LD R1, _____

What about R1?

Let's just store #27 somewhere and use an LD.

Now, we need to initialize R6 to 0, R1 to #27, and R2 to x3100.

Prepare Our Registers to Initialize the Histogram

```
x3000 LEA R0,xFF
x3001 AND R6,R6,#0
x3002 LD R1, _____
x3003 ADD R2,R0,#0
```

Now, we need to initialize R6 to 0, R1 to #27, and R2 to x3100.

And what about R2?

Remember that R0 already has the value x3100!

We're Ready to Fill the Histogram with 0s

Remember our register contents:

R1 a loop counter (27 iterations)
R2 current histogram bin to fill
R6 the number 0 (to store)

In our loop body, we write one 0 (from **R6**) to a bin at the memory location pointed to by **R2**.

Then we point to the next bin (increment **R2**).

Then we decrement our loop counter (**R1**).

Finally, we loop until the counter reaches 0.

Fill One Histogram Bin with 0

```
x3000 LEA R0,xFF
x3001 AND R6,R6,#0
x3002 LD R1, _____
x3003 ADD R2,R0,#0
x3004 STR R6,R2,#0
```

Write one 0 (from R0) to the histogram bin to which R2 points.

Is there an LC-3 instruction for that?

Point to the Next Histogram Bin

```
x3000 LEA R0,xFF
x3001 AND R6,R6,#0
x3002 LD R1, _____
x3003 ADD R2,R0,#0
x3004 STR R6,R2,#0
x3005 ADD R2,R2,#1
```

Point R2 to the next bin.

Is there an LC-3 instruction for that?

Decrement the Loop Counter

```
x3000 LEA R0,xFF
x3001 AND R6,R6,#0
x3002 LD R1, _____
x3003 ADD R2,R0,#0
x3004 STR R6,R2,#0
x3005 ADD R2,R2,#1
x3006 ADD R1,R1,#-1
```

Decrement the
loop counter.

Is there an LC-3
instruction for that?

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 13

Branch Backward Until We Finish Filling the Histogram

```
x3000 LEA R0,xFF
x3001 AND R6,R6,#0
x3002 LD R1, _____
x3003 ADD R2,R0,#0
x3004 STR R6,R2,#0
x3005 ADD R2,R2,#1
x3006 ADD R1,R1,#-1
x3007 BRp #-4
```

Branch backward
until we have
written 27 bins.

Is there an LC-3
instruction for that?

R1 started at #27.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 14

Memory Addresses Do Not Appear in Real Code

```
x3000 LEA R0,xFF
x3001 AND R6,R6,#0
x3002 LD R1, _____
x3003 ADD R2,R0,#0
x3004 STR R6,R2,#0
x3005 ADD R2,R2,#1
x3006 ADD R1,R1,#-1
x3007 BRp #-4
```

Now the histogram
is filled with 0s.

See the memory
addresses?

Those are just for us. They're not really in
the code, as you should already know.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 15

In Binary Programs, Instructions Must Appear as Bits

```
x3000 LEA R0,xFF
x3001 AND R6,R6,#0
x3002 LD R1, _____
x3003 ADD R2,R0,#0
x3004 STR R6,R2,#0
x3005 ADD R2,R2,#1
x3006 ADD R1,R1,#-1
x3007 BRp #-4
```

Now the histogram
is filled with 0s.

See the
instructions?

So far, those are more like our comments.
Soon, you can write code that way.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 16

We Still Have Initialization Work to Do

What about these other registers?

- R1** string pointer (moves)
- R2** current character from string
- R3, R4, R5** ASCII constants (to be chosen)
- R6** temporary

Let's initialize them now.
(No need to initialize **R2** nor **R6**.)

Initialize the Remaining Registers with LD

```
x3008 LD R3,x1B
x3009 LD R4,x1B
x300A LD R5,x1B
x300B LD R1,x1B
```

Initialize the
other registers
using LD.

Look good?

Are those all loading
the same value?

The addresses are
PC-relative, so each
loads from a separate
memory location!

Ready to Count Letters?

Now we are finally ready to count letters!

Before We Can Count, We Must Load a Character

The first step?

- Load a character from the string, and
- check if it's **NUL**.

Load a Character from the String

x300C LDR R2,R1,#0

Remember that R1 points to the next character in the string.

Also remember that we want the character in R2.

Load a character from the string.

If We Find a NUL, We are Done

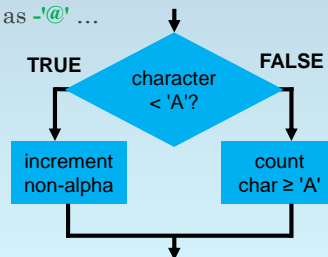

x300C LDR R2,R1,#0
x300D BRz _____

Check for NUL (x00).

Now We Can Classify the Character

We need to compare with capital A.

Let's define **R3** as '@' ...

Subtract @ to Compare with Capital A

Remember the ASCII table?

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	...	@	A	...	Z	[...	`	
						a	...	z	{
									...
									DEL

Subtracting '@' allows us to check for non-alphabetic characters in the left region.

We store the difference (original character minus '@') back in **R2**, so A through Z become 1 through 26.

Subtract @ to Compare with Capital A

```
x300C LDR R2,R1,#0
x300D BRz _____
x300E ADD R2,R2,R3
```

Compare with
capital A.

Add R3 ('@') to R2
and write the sum
back into R2.

Branch Unless We Have a Character in the Left Region

```
x300C LDR R2,R1,#0
x300D BRz _____
x300E ADD R2,R2,R3
x300F BRp _____
```

Branch forward if the
character is not in the
left non-alphabetic
region.

What is the branch
condition?

Time to Increment the Non-Alpha Histogram Bin

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F					
NUL	...	@	A	...	Z	[...	`	a	...	z	{	...	DEL

If the result is not positive,
 ◦ the character is in the left region and
 ◦ is not a letter.

**So we can increment the
non-alpha bin (at x3100).**

Increment Memory Location x3100 (Non-Alpha Bin)

```
x300C LDR R2,R1,#0
x300D BRz _____
x300E ADD R2,R2,R3
x300F BRp _____
x3010 LDR R6,R0,#0
```

Increment memory
at x3100 (the value
held in R0).

So ... ?

Where should we
put the value?

Is there an LC-3
instruction for that?

No.

Increment Memory Location x3100 (Non-Alpha Bin)

```
x300C LDR R2,R1,#0
x300D BRz _____
x300E ADD R2,R2,R3
x300F BRp _____
x3010 LDR R6,R0,#0
x3011 ADD R6,R6,#1
```

Increment memory
at x3100 (the value
held in R0).

And now increment
the value.

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 29

Increment Memory Location x3100 (Non-Alpha Bin)

```
x300C LDR R2,R1,#0
x300D BRz _____
x300E ADD R2,R2,R3
x300F BRp _____
x3010 LDR R6,R0,#0
x3011 ADD R6,R6,#1
x3012 STR R6,R0,#0
```

Increment memory
at x3100 (the value
held in R0).

And put the new
value back.

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 30

We Are Done with That Character

We are done counting that character.

The loop is inside the first task
shown here (the one labeled
“increment correct bin”).

So now we need to
point to the next character...

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 31

Go to the End of the Loop

```
x300C LDR R2,R1,#0
x300D BRz _____
x300E ADD R2,R2,R3
x300F BRp x4
x3010 LDR R6,R0,#0
x3011 ADD R6,R6,#1
x3012 STR R6,R0,#0
x3013 BRnzp _____
```

We are done
counting this
character.

Branch (always) to
the end of our loop.

(somewhere)

We can fill this
offset in now.

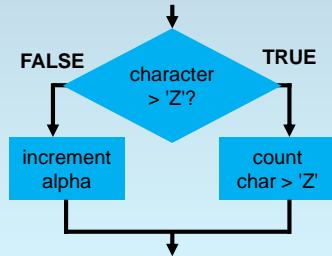

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 32

We Need to Check for a Capital Letter

Next, we compare with capital **Z**.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 33

Subtract Z to Make the Next Comparison

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	@	A	Z	[`	a	z	{	DEL

This time, we want to subtract '**Z**'.

But we already subtracted '@', so now we add '@' - '**Z**' (let's keep this value in **R4**).

We discard the result (store the result in **R6**).

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 34

Add (@ – Z) to Compare with Capital Z

x3014 ADD R6,R2,R4

Compare with
capital Z.

Add R4 ('@' – 'Z')
to R2 and write the
sum into R6.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 35

Branch Unless We Have a Capital Letter

x3014 ADD R6,R2,R4
x3015 BRp _____

Branch forward if the
character is not a
capital letter.

What is the branch
condition?

Remember: we just
calculated (original
character – 'Z')

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 36

Time to Increment the One Letter's Histogram Bin

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	...	@	A	...	Z	[...	`	
						a	...	z	{
									DEL

If the result is not positive,
the character is a capital letter.

What bin should we increment?

(Hint: R2 now holds 1 to 26 for A to Z.)

The bin at address $x3100 + R2$.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 37

Increment One Letter's Histogram Bin

```
x3014 ADD R6,R2,R4
x3015 BRp _____
x3016 ADD R2,R2,R0
```

Increment memory
at $x3100 + R2$
($R0 + R2$).

Where can we put
the bin pointer?

We only need R2 to
find the right bin.

First, we need
to calculate a
bin pointer.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 38

Increment One Letter's Histogram Bin

```
x3014 ADD R6,R2,R4
x3015 BRp _____
x3016 ADD R2,R2,R0
x3017 LDR R6,R2,#0
```

Increment memory
at address
pointed to by R2.

Is there an LC-3
instruction for that?

Same answer as
last time: load,
modify, store.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 39

Increment One Letter's Histogram Bin

```
x3014 ADD R6,R2,R4
x3015 BRp _____
x3016 ADD R2,R2,R0
x3017 LDR R6,R2,#0
x3018 ADD R6,R6,#1
```

Increment memory
at address
pointed to by R2.

And now increment
the value.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 40

Increment One Letter's Histogram Bin

```
x3014 ADD R6,R2,R4
x3015 BRp _____
x3016 ADD R2,R2,R0
x3017 LDR R6,R2,#0
x3018 ADD R6,R6,#1
x3019 STR R6,R2,#0
```

Increment memory
at address
pointed to by R2.

And put the new
value back.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 41

We Are Done with That Character

As before, we are done with that character.

So now we need to
point to the next character...

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 42

Go to the End of the Loop

```
x3014 ADD R6,R2,R4
x3015 BRp x5
x3016 ADD R2,R2,R0
x3017 LDR R6,R2,#0
x3018 ADD R6,R6,#1
x3019 STR R6,R2,#0
x301A BRnzp _____
```

We are done
counting this
character.

Branch (always) to
the end of our loop.

(somewhere)

We can fill this
offset in now.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 43

We Need to Check for the Middle Region

Next, we want to look for the start
of the lower case letters.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 44

Subtract x60 to Make the Next Comparison

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	@	A	Z	[`	a	z	{	DEL

We want to subtract **x60** (backquote, ``).

But we already subtracted '@' from **R2**, so now add '@' - `` (let's keep this value in **R5**).

Let's write the result back to **R2** so that lower case letters produce values 1 to 26 in **R2**.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 45

Add (@ - ``) to Compare with Lower Case a

```
x301B ADD R2,R2,R5
```

Compare with lower case a.

Add R5 ('@' - ``) to R2 and write the sum back to R2.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 46

When Do We Have a Character in the Middle Region?

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	@	A	Z	[`	a	z	{	DEL

We just wrote (original character minus x60) into **R2**.

Under what conditions (N, Z, P) do we have a character in the middle region?

N and Z

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 47

How Can We Increment the Non-Alpha Bin?

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	@	A	Z	[`	a	z	{	DEL

So for conditions **N** or **Z**, we want to increment the non-alpha bin.

How?

Didn't we already write that code?

Let's just branch to it!

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 48

Branch If We Have a Character in the Middle Region

x301B ADD R2,R2,R5
x301C BRnz _____

Handle characters in the middle region.

So what is the branch condition?

We can find the right offset now (the code is already written), but let's just leave it for later.

We Need to Check for a Lower Case Letter

Next, we compare with lower case **z**.

Subtract z to Make the Next Comparison

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	@	A	Z	[;	a	z	{	DEL

This time, we want to subtract **'z'**.

But we already subtracted **''**, so now we add **'' - 'z'** (it's already in **R4**!).

We discard the result (store the result in **R6**).

Add (' - z) to Compare with Lower Case z

x301B ADD R2,R2,R5
x301C BRnz _____
x301D ADD R6,R2,R4

Compare with lower case **z**.

Add R4 (' - 'z')
to R2 and write the
sum into R6.

When Do We Have a Lower Case Letter?

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	@	A	Z	[`	a	z	{	DEL

We just wrote (**original character minus 'z'**) into **R6**.

**Under what conditions (N, Z, P)
do we have a lower case letter?**

N and Z

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 53

How Can We Increment the Right Letter's Bin?

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	@	A	Z	[`	a	z	{	DEL

So for conditions **N** or **Z**, we want to increment one of the letter's histogram bins.

How?

Didn't we already write that code?

Let's just branch to it!

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 54

How Can We Increment the Right Letter's Bin?

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	@	A	Z	[`	a	z	{	DEL

Let's be clear:

- We are able to reuse the code because **we designed the code to be reusable**.
- In both cases, **R0** points to the histogram, and **R2** is 1 to 26 for the letter.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 55

Branch If We Have a Lower Case Letter

```
x301B ADD R2,R2,R5
x301C BRnz _____
x301D ADD R6,R2,R4
x301E BRnz _____
```

Handle lower
case letters.

What is the
branch condition?

Again, we can find the
right offset, but we'll
just leave it blank.

ECE 120: Introduction to Computing

© 2016 Steven S. Lametta. All rights reserved.

slide 56

We Know that the Character is Not a Letter

x00	x40	x41	x5A	x5B	x60	x61	x7A	x7B	x7F
NUL	"	@	A	Z	[^	z	{	DEL

At this point, we know that the original character was not a letter.

So ... ?

Branch (unconditionally) to the code that increments the non-alpha histogram bin.

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 57

Branch to the Code for Non-Alphabetic Characters

```
x301B ADD R2,R2,R5
x301C BRnz _____
x301D ADD R6,R2,R4
x301E BRnz _____
x301F BRnzp _____
```

Handle the last region.

Again, we can find the right offset, but we'll just leave it blank.

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 58

Next, Advance the String Pointer

We are now finished with the upper task.

We can write the code to point to the next character.

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 59

Advance the String Pointer to the Next Character

```
x301B ADD R2,R2,R5
x301C BRnz _____
x301D ADD R6,R2,R4
x301E BRnz _____
x301F BRnzp _____
x3020 ADD R1,R1,#1
```

Advance the string pointer (in R1).

Is there an LC-3 instruction for that?

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 60

Our Loop Body is Complete

And now we're done with counting a character and advancing the string pointer, so we can return to the start of our loop.

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 61

Return to the Start of the Loop

```

x301B ADD R2,R2,R5
x301C BRnz _____
x301D ADD R6,R2,R4
x301E BRnz _____
x301F BRnzp _____
x3020 ADD R1,R1,#1
x3021 BRnzp _____
  
```

Return to the start
of the loop.

Is there an LC-3
instruction for that?

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 62

We Need a HALT and Some Data

```

x3022 TRAP x25
x3023 #27
x3024 '@' - '@'
x3025 '@' - 'Z'
x3026 '@' - ''
x3027 x4000
  
```

We need a HALT
and some data.

The full program is
available online, both
as a printout and as
real code.

Be sure to write a
string before you
run the code
(unless you like 0s).

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 63

The Rest is Left to You

I'll leave the rest for you.

All of the counting.

All of the bits.

All of the fun, really!

ECE 120: Introduction to Computing

© 2016 Steven S. Lumetta. All rights reserved.

slide 64
